

Setup on Mac

1. Download and open the Docker for Mac App
2. Open Utilities/XQuartz (download/update if using for first time.)
3. Type `xhost + 127.0.0.1` in a terminal
4. Type

```
docker run -e DISPLAY=host.docker.internal:0 -it -v "$(pwd)":/src ubuntu
```

into the terminal
5. Go into the `/src` directory in the terminal and you should see all your files.
6. Type `apt-get -y update && apt-get install libfontconfig libxft-dev` to download the packages configure needs
7. `cd configure-8.4-linux-intel-64bit`
8. Launch `./configure`
